

Documentation

TMail – Temporary Multi Domain Email System

By Harshit Peer

Requirements

Server Requirements

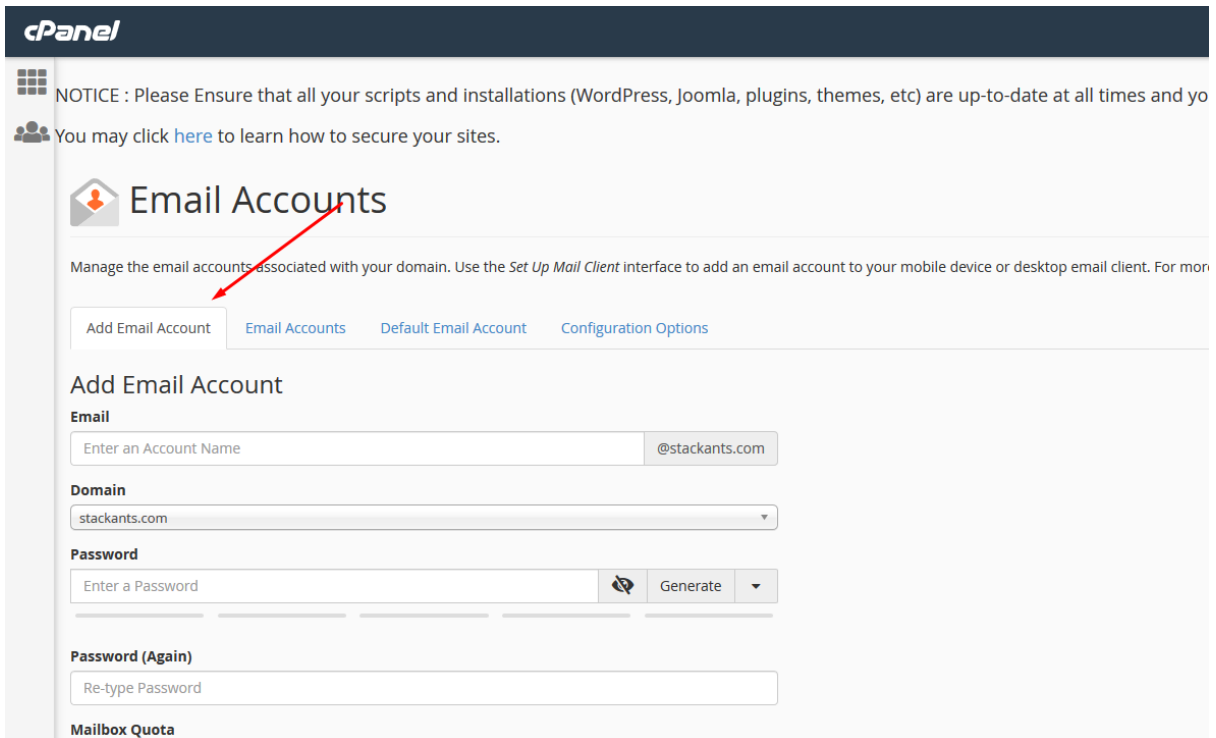

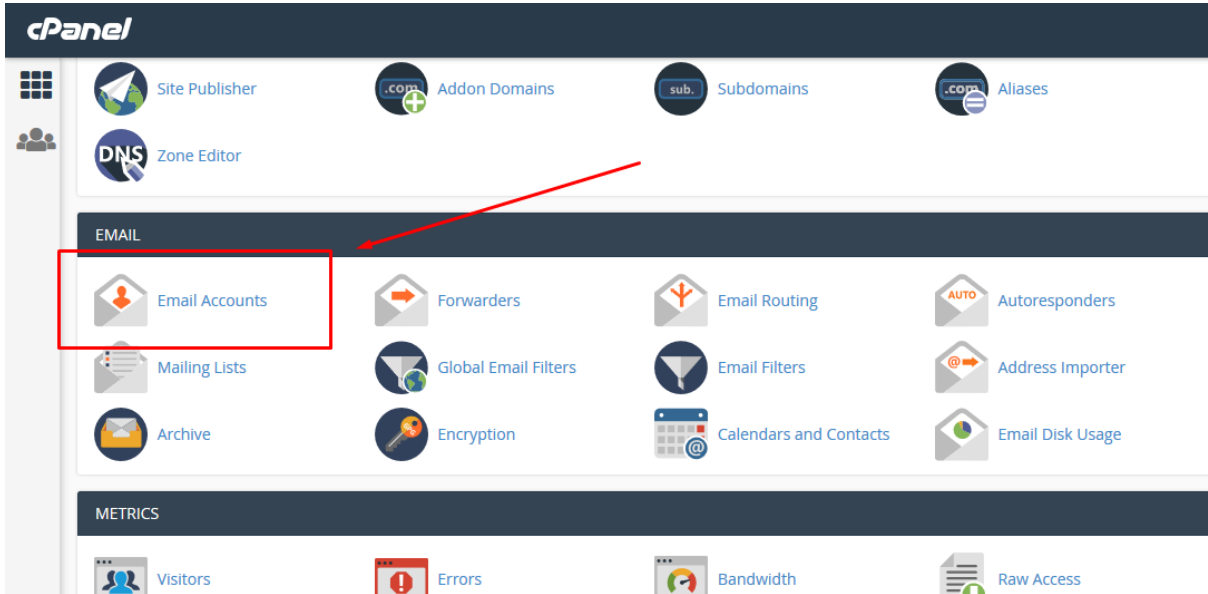

- PHP IMAP Extension
- iconv Extension

Other Requirements

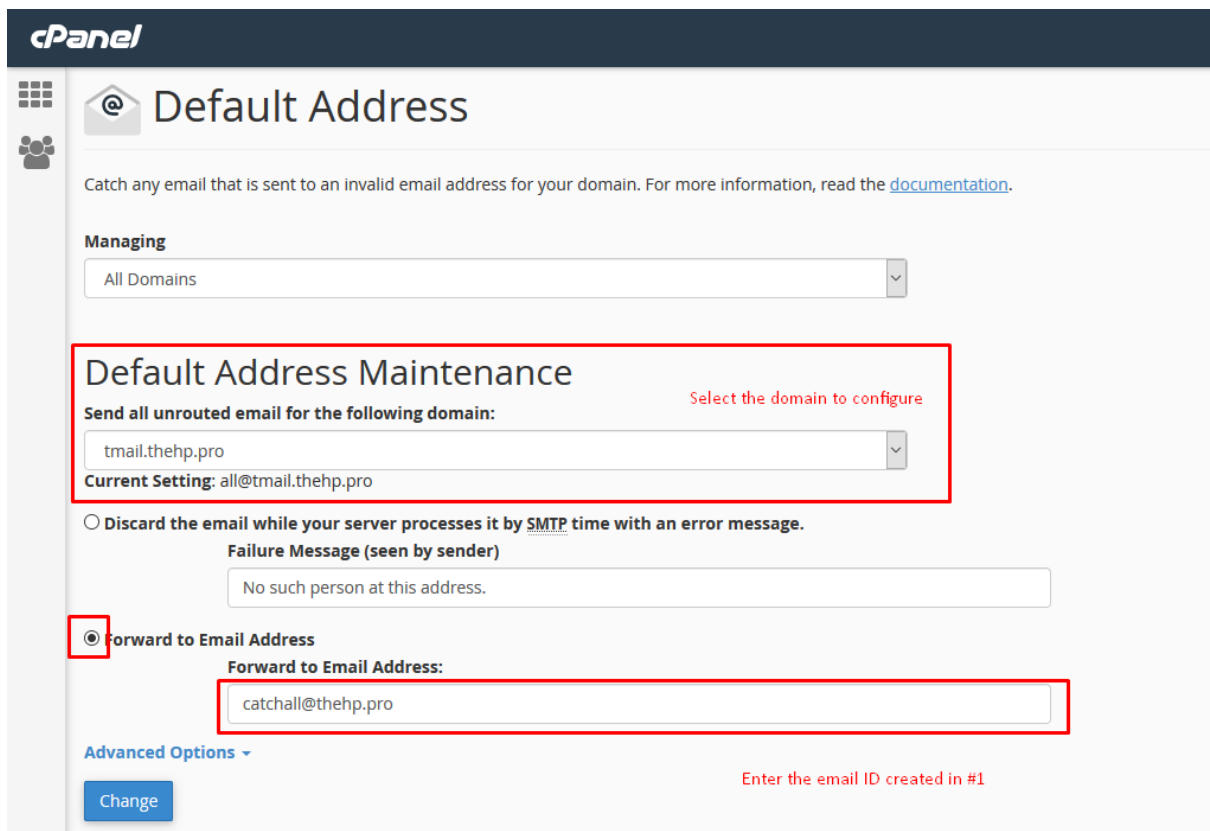

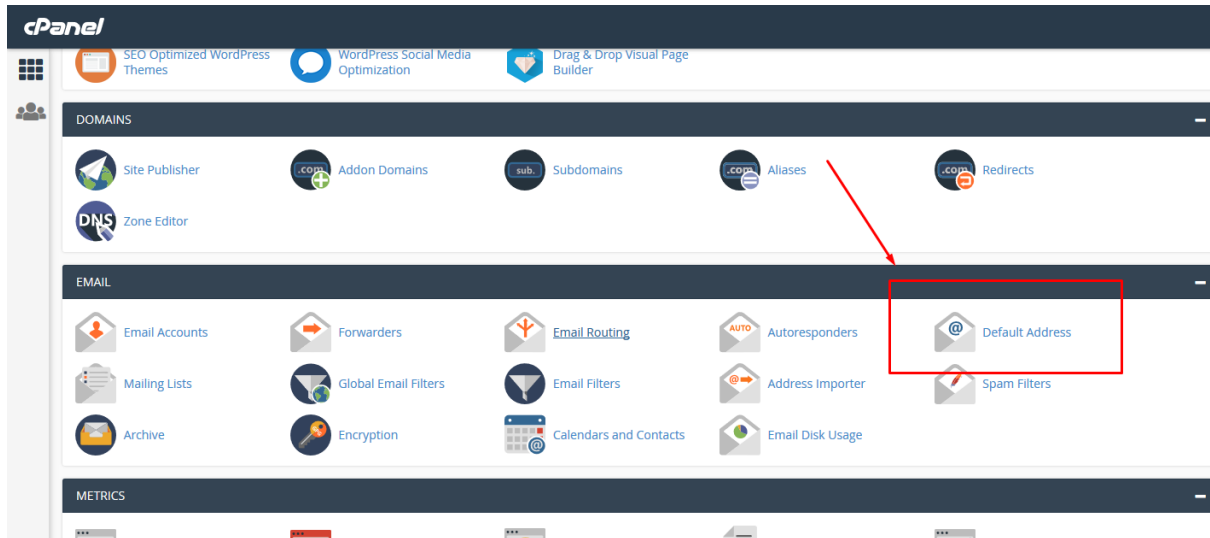

- IMAP Email
- Default Email Forwarder

Installation and Setup (cPanel)

#1 – Create a new Email Account for catching all Email

#2 – Forwarding all emails to above created email ID.

Repeat above step #2 for all domains you want to configure under TMail Script.

#3 – Upload Files

- You will find 2 different folders Classic and Modern. You can choose which layout you want on your website.
- If you are updating the website upload the **Update.zip** file otherwise upload **New.zip** file.
- Extract that to root directory where you have already installed TMail.

#4 – Configure Website

Navigate to URL – **yourdomain.com/admin.php**

The screenshot shows the TMail Admin Panel login page. In the top left corner, there is an envelope icon with an '@' symbol. In the top right corner, there is a language selection dropdown menu currently set to 'English'. The main content area features a text input field with the placeholder text 'Enter Admin Password'. Below the input field is a button labeled 'LOGIN'.

If you are here for the first time, you need to enter any random password and click on Login. For security reasons, your default admin password will be set to **tmail123**

Immediately change your password after login to Admin Panel

#5 – Adding / Modifying Menu Links Icon (Only in Modern Layout)

Visit the above mention link “Links of Icons”

Do you want to use SSL while connecting to IMAP?
Yes

Do you want to save Logs?
No
